Project Scope
The Power BI solution is designed to provide interactive business insights through dashboards, charts, KPI cards, slicers, and tabular reporting visuals. The dashboard supports data-driven decision making through trend analysis, category distribution analysis, KPI monitoring, and interactive filtering capabilities.

Business Requirements Provide consolidated reporting through Power BI dashboards. Enable users to filter and interact with report data dynamically. Support KPI tracking using cards and gauges. Provide visual insights through charts and graphical summaries. Allow drill-down and comparative analysis using tables and category visuals.
